Asgn1 – LOC Counter And Initial Estimates

Program	Estimated Time	Estimated Line of Code	Actual Time	Line of Code
Math Operation.java	5 minutes	10	15 minutes	8
OperationsDriver.java	3 minutes	7	5 minutes	11

What I considered a line of code

1. Basically anything that ends with a “;” . I do not discriminate when it come to a variables and single line codes. I count all of them as a single line of code as long as they have a “;” because foe example a line of code with a variable that is not initialized will not run therefore any line with a “;” counts as a single line of code.

What I used to Identify a method

1. Any line that has the word public, protected and private which has a ")" at the end. Once this is seen the code will look for the line in the method until it sees a "}".
